

Title: **AM-57-1 to R2: Let's give rivers a new life to save our own**

Tabled by: Partia Zieloni

Draft text

From line 56 to 58:

destruction of river-related ecosystems, as well as the inevitable spread of radionuclides accumulated after the Chernobyl disaster.[Space]

The project is also extremely questionable from the economic aspects. Due to the climate change many rivers have a much lower water flow than they used to or completely dry out in the summer time, thus being unusable for transport. Investments into their restructuring are mostly wasted, also because they are based on an old geography of the water flow that does not correspond to the present reality.

Explanation / Comment

Added more reasons for economic unfeasibility of building new waterways following the discussion with the EGP Committee.
